REMARKS

This is UNEVALUATED Information

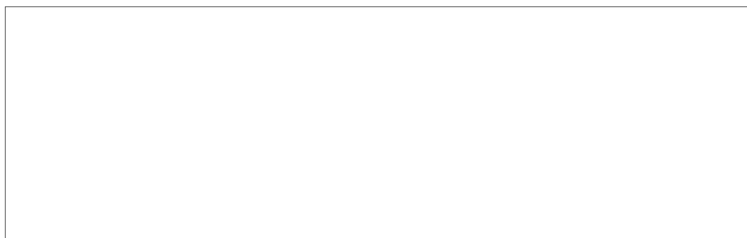

25X1

During the summer of 1954, steel hangars were under construction at Zatec (5020 N / 1335 E) airfield. According to an original photograph of such a hangar, the building had a barrel roof and was about 22 meters high.

Comment. For side view of presumed repair hangar, see Annex. 25X1

The reported height seems to be overrated. According to previous reports on Zatec airfield, the structures were 8 to 14 meters high.
